Integrated M.Sc. Geology
(BSc Hons. component)
(Choice based credit system)
Syllabus – Revised in June, 2016
CENTRAL UNIVERSITY OF KARNATAKA
Department of Geology
School of Earth Sciences

Integrated M.Sc. GEOLOGY
(BSc Hons. component)
Syllabus – 2016 (Revised, June 2016)

I: PREAMBLE

A: Context

Geology is the study of the Earth, the materials of which it is made, the structure of those materials, and the processes acting upon them. It includes the study of organisms that have inhabited our planet. An important part of geology is the study of how Earth’s materials, structures, processes and organisms have changed over time. Geology can also refer generally to the study of the solid features of any celestial body (such as the geology of the Moon or Mars).

In this context the Central University of Karnataka introduced Integrated MSc course in Geology to reduce the disparity between the need and availability of competent professionals to cater the requirements of our nation. This programme is basically an academic programme which focuses on preparing the students for research, as well as, for application of Geological knowledge in various field settings.

B: Objectives

The Central University aims to create qualified professionals to meet the increasing social needs of the hour. Hence, this curriculum is instituted with the following objectives:

- To shape skilled and qualified geologists to serve the industrial, management, educational and developmental sectors of the society and the country.
- To contribute to the existing knowledge bank in geological sciences with an integrated and interdisciplinary approach.
- To bring subjects like environmental geology, disaster management, water security, resource management, application of remote sensing and GIS in the field of Geology etc., as academic subjects into the mainstream.

To develop in-depth knowledge and skills in qualitative and quantitative research methods through laboratory, field and web modes of learning.

C: Course orientation

A three-year bachelor’s degree course in Geology is offered under the School of Earth Sciences following the ‘choice-based credit system’ with an integrated-interdisciplinary approach. The curriculum comprises inputs drawn from all basic geology streams and its application based study with the implication of Remote sensing.
techniques and GIS. The curriculum also focuses on the application of geo-informatics as a solution to major geological problems.

D: Unique features

The unique feature of this curriculum is that each core paper is integrated with theoretical knowledge and practical approach. The learning is mediated through class room facilitations, virtual classroom learning modalities, laboratory experiments, internship, supervised dissertations, field works, field tour, etc. Knowledge acquisition procedures are monitored through lecture, participatory and cooperative learning. The learning processes are facilitated by experienced faculty and experts drawn from various academic institutions of repute.

F: Career development

In addition to the prescribed curriculum, students will be given ample opportunities to enhance their personal and professional competencies holistically through active participation in seminars, workshops, conferences, and contributions through the journal, book, and media clubs periodically. Facilities will be provided to students to undergo personal counseling, career guidance and employment opportunity.

II: REGULATIONS

1. Name of the Course: Integrated M.Sc. Geology (under School of Earth Sciences)
2. Duration of the Course: Three years (Six semesters)
3. Eligibility and Attendance: As per University rules.
4. Intake: 30 (Thirty only)
5. Medium of Instruction and examination: English
6. Miscellaneous: All other matters not referred to specifically in these regulations shall be governed as per the Ordinances of the University as revised from time to time.
7. Course structure and credit allocation: Each credit denotes 1 hour for theory and two-hours for practicum. Total credits of the programme: 148
8. Specialization: Application of Earth science in various related fields with the support of Geo-informatics
III: SCHEME OF STUDY AND EXAMINATIONS

(L=Lecture, T= Tutorial, P= Practical) Interested students can opt additional single credit papers not exceeding four credits in every semester.

UG (BSc Hons.) Component

CORE COURSE: GEOLOGY

Paper -I

EARTH SYSTEM SCIENCE

Unit 1: Earth as a planet
Holistic understanding of dynamic planet 'Earth' through Astronomy, Geology, Meteorology and Oceanography.
Introduction to various branches of Earth Sciences.
General characteristics and origin of the Universe, Solar System and its planets. The terrestrial and jovian planets.
Meteorites and Asteroids
Earth in the solar system - origin, size, shape, mass, density, rotational and revolution parameters and its age.

Unit 2: Earth's magnetic field
Earth's magnetic field
Formation of core, mantle, crust, hydrosphere, atmosphere and biosphere
Convection in Earth's core and production of its magnetic field
Mechanical layering of the Earth.

Unit 3: Plate Tectonics
Concept of plate tectonics, sea-floor spreading and continental drift
Geodynamic elements of Earth- Mid Oceanic Ridges, trenches, transform faults and island arcs
Origin of oceans, continents, mountains and rift valleys
Earthquake and earthquake belts
Volcanoes- types, products and their distribution.

Unit 4: Hydrosphere and Atmosphere
Oceanic current system and effect of Coriolis force
Concepts of eustasy
Land-air-sea interaction
Wave erosion and beach processes
Atmospheric circulation
Weather and climatic changes
Earth's heat budget.

Unit 5: Soil
Soils- processes of formation, soil profile and soil types.

Unit 6: Understanding the past from stratigraphic records
Nature of stratigraphic records
Standard stratigraphic time scale and introduction to the concept of time in geological studies
Introduction to geochronological methods and their application in geological studies
History of development in concepts of uniformitarianism, catastrophism and neptunism
Laws of superposition and faunal succession
Introduction to geology and geomorphology of Indian subcontinent.

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Unit 7: Cosmic abundance of elements
Distribution of elements in solar system and in Earth
Chemical differentiation and composition of the Earth
General concepts about geochemical cycles and mass balance
Properties of elements
Geochemical behavior of major elements
Mass conservation of elements and isotopic fractionation.

Tutorial:

Study of major geomorphic features and their relationships with outcrops through physiographic models.
Detailed study of topographic sheets and preparation of physiographic description of an area
Study of soil profile of any specific area
Study of distribution of major lithostratigraphic units on the map of India
Study of distribution of major dams on map of India and their impact on river systems
Study of major ocean currents of the World
Study of seismic profile of a specific area and its interpretation

SUGGESTED READINGS:

CORE COURSE: GEOLOGY
Paper -II
MINERAL SCIENCE

Unit 1: Crystallography
Elementary ideas about crystal morphology in relation to internal structures
Crystal parameters and indices
Crystal symmetry and classification of crystals into six systems and 32 point groups

Unit 2: Crystal symmetry and projections
Elements of crystal chemistry and aspects of crystal structures
Stereographic projections of symmetry elements and forms

Unit 3: Rock forming minerals
Minerals - definition and classification, physical and chemical properties
Composition of common rock-forming minerals
Silicate and non-silicate structures; CCP and HCP structures

Unit 4: Properties of light and optical microscopy
Nature of light and principles of optical mineralogy
Introduction to the petrological microscope and identification of common rock-forming minerals

PRACTICALS:

Observation and documentation on symmetry of crystals
Study of physical properties of minerals in hand specimen
Silicates: Olivine, Garnet, Andalusite, Sillimanite, Kyanite, Staurolite, Beryl, Tourmaline, Augite, Actinolite, Tremolite, Hornblende, Serpentine, Talc, Muscovite, Biotite, Phlogopite, Quartz, Orthoclase, Plagioclase, Microcline, Nepheline, Sodalite, Zeolite
Quartz varieties: Chert, Flint, Chalcedony, Agate, Jasper, Amethyst, Rose quartz, Smoky quartz, Rock crystal.
Native Metals/non-metals, Sulfides, Oxides- Copper, Sulfur, Graphite, Pyrite, Corundum, Magnetite
Hydroxides, Halides, Carbonates, Sulfates, Phosphates: Psilomelane, Fluorite, Calcite, Malachite, Gypsum, Apatite.
Study of some key silicate minerals under optical microscope and their characteristic properties

SUGGESTED READINGS:

CORE COURSE: GEOLOGY
Paper -III
ELEMENTS OF GEOCHEMISTRY

Unit 1: Concepts of geochemistry
Introduction to properties of elements: The periodic table
Chemical bonding, states of matter and atomic environment of elements
Geochemical classification of elements

Unit 2: Layered structure of Earth and geochemistry
Composition of different Earth reservoirs and the nuclides and radioactivity
Conservation of mass, isotopic and elemental fractionation
Concept of radiogenic isotopes in geochronology and isotopic tracers

Unit 3: Element transport
Advection and diffusion
Chromatography
Aqueous geochemistry- basic concepts and speciation in solutions, Eh, pH relations Elements of marine chemistry
Mineral reactions- diagenesis and hydrothermal reactions.

Unit 4: Geochemistry of solid Earth
The solid Earth – geochemical variability of magma and its products.
The Earth in the solar system, the formation of solar system
Composition of the bulk silicate Earth
Meteorites

Unit 5: Geochemical behavior of selected elements like Si, Al, K, Na etc.

Tutorial:
Types of geochemical data analysis and interpretation; of common geochemical plots. Geochemical analysis of geological materials.
Geochemical variation diagrams and its interpretations.

SUGGESTED READINGS:

CORE COURSE: GEOLOGY
Paper -IV
STRUCTURAL GEOLOGY

Unit 1: Structure and Topography
Effects of topography on structural features, Topographic and structural maps; Importance representative factors of the map

Unit 2: Stress and strain in rocks
Concept of rock deformation: Stress and Strain in rocks, Strain ellipses of different types and their geological significance.
Planar and linear structures; Concept of dip and strike; Outcrop patterns of different structures.
Unit 3: Folds
Fold morphology; Geometric and genetic classification of folds; Introduction to the mechanics of folding: Buckling, Bending, Flexural slip and flow folding

Unit 4: Foliation and lineation
Description and origin of foliations: axial plane cleavage and its tectonic significance
Description and origin of lineation and relationship with the major structures

Unit 5: Fractures and faults
Geometric and genetic classification of fractures and faults
Effects of faulting on the outcrops
Geologic/geomorphic criteria for recognition of faults and fault plane solutions

PRACTICALS:
Basic idea of topographic contours, Topographic sheets of various scales.
Introduction to Geological maps: Lithological and Structural maps
Structural contouring and 3-point problems of dip and strike
Drawing profile sections and interpretation of geological maps of different complexities Exercises of stereographic projections of mesoscopic structural data (planar, linear, folded etc.)

SUGGESTED READINGS:

CORE COURSE: GEOLOGY

Paper -V
IGNEOUS PETROLOGY

Unit 1: Concepts of Igneous petrology
Introduction to petrology: Heat flow, geothermal gradients through time, origin and nature of magma

Unit 2: Forms
IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Classification of igneous rocks
Textures and structures of igneous rocks
Mode of occurrence of Igneous rocks

Unit 3: Phase diagrams and petrogenesis
Binary and Ternary Phase diagrams in understanding crystal-melt equilibrium in basaltic and granitic magmas
Magma generation in crust and mantle, their emplacement and evolution

Unit 4: Magmatism in different tectonic settings
Magmatism in the oceanic domains (MORB, OIB)
Magmatism along the plate margins (Island arcs/continental arcs)

Unit 5: Petrogenesis of Igneous rocks
Petrogenesis of Felsic and Mafic igneous rocks
Komatiites, Granitoides, Basalt, Gabbros
Alkaline rocks, kimberlites and lamproites.

PRACTICALS:
Study of important igneous rocks in hand specimens and thin sections- granite, granodiorite, diorite, gabbro, anorthosites, ultramafic rocks, basalts, andesites, trachyte, rhyolite, dacite,

SUGGESTED READINGS:

CORE COURSE: GEOLOGY

Paper -VI
SEDIMENTARY PETROLOGY

Unit 1: Origin of sediments
Weathering and sedimentary flux: Physical and chemical weathering, soils and paleosols.

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Unit 2: Sediment granulometry
Grain size scale, particle size distribution, Environmental connotation; particle shape and fabric

Unit 3: Sedimentary textures, structures and environment
Fluid flow, sediment transport and sedimentary structures: Types of fluids, Laminar vs. turbulent flow, Particle entrainment, transport and deposition.
Paleocurrent analysis- Paleocurrents for different sedimentary environments Sedimentary structure- Primary and syn-sedimentary structures

Unit 4: Varieties of sedimentary rocks
Siliciclastic rocks: Conglomerates, sandstones, mudrocks. Carbonate rocks, controls of carbonate deposition, components and classification of limestone, dolomite and dolomitisation

Unit 5: Diagenesis
Concepts of diagenesis Stages of diagenesis Compaction and cementation.

PRACTICALS:
Exercises on sedimentary structures Particle size distribution and statistical treatment Paleocurrent analysis Petrography of clastic and non-clastic rocks through hand specimens and thin sections

SUGGESTED READINGS:

CORE COURSE: GEOLOGY

Paper -VII
PALEONTOLOGY

Unit 1: Fossilization and fossil record
Nature and importance of fossil record; Fossilization processes and modes of preservation
Unit 2: Taxonomy and Species concept
Species concept with special reference to paleontology, Taxonomic hierarchy Theory of organic evolution interpreted from fossil record
Unit 3: Invertebrates

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Brief introduction to important invertebrate groups (Bivalvia, Gastropoda, Brachiopoda) and their biostratigraphic significance
Significance of ammonites in Mesozoic biostratigraphy and their paleobiogeographic implications. Functional adaptation in trilobites and ammonoids.

Unit 4: Vertebrates. Brief introduction to various vertebrate groups. Origin of vertebrates and major steps in vertebrate evolution.

Unit 5. Introduction to Paleobotany, Gondwana Flora
Introduction to Ichnology.

Unit 6: Application of fossils in Stratigraphy
Biozones, index fossils, correlation
Role of fossils in sequence stratigraphy

PRACTICALS:
Study of fossils showing various modes of preservation
Study of diagnostic morphological characters, systematic position, stratigraphic position and age of various invertebrate, vertebrate and plant fossils

SUGGESTED READINGS

CORE COURSE: GEOLOGY
Paper - VIII
METAMORPHIC PETROLOGY

Unit 1: Metamorphism: controls and types.
Definition of metamorphism. Factors controlling metamorphism. Types of metamorphism - contact, regional, fault zone metamorphism, impact metamorphism.

Unit 2: Metamorphic facies and grades
Index minerals, Chemographic projections
Metamorphic zones and isogrades.
Concept of metamorphic facies and grade
Mineralogical phase rule of closed and open system
Structure and textures of metamorphic rocks

Unit 3: Metamorphism and Tectonism
IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Relationship between metamorphism and deformation
Metamorphic mineral reactions (prograde and retrograde)

Unit 4: Migmatites and their origin
Metasomatism and role of fluids in metamorphism

Unit 5: Metamorphic rock associations- schists, gneisses, khondalites, charnockites, blue schists and eclogites

PRACTICALS:
Megascopic and microscopic study (textural and mineralogical) of the following metamorphic rocks: Low grade metamorphic rocks: serpentinites, albite-epidote-chlorite-quartz schist, slate, talc-tremolite-calcite-quartz schist.
Medium to high grade metamorphic rocks: Gneisses, amphibolite, hornfels, garnetiferous schists, sillimanite-kyanite-bearing rocks, Granulites, eclogite, diopside-forsterite marble.
Laboratory exercises in graphic plots for petrochemistry and interpretation of assemblages.

SUGGESTED READINGS:

CORE COURSE: GEOLOGY
Paper -IX
STRATIGRAPHIC PRINCIPLES AND INDIAN STRATIGRAPHY
Unit 1: Principles of stratigraphy
Fundamentals of litho-, bio- and chrono-stratigraphy
Introduction to concepts of dynamic stratigraphy (chemostratigraphy, seismic stratigraphy, sequence stratigraphy)

Unit 2: Code of stratigraphic nomenclature
Brief introduction to the concepts of lithostratigraphy, biostratigraphy, chronostratigraphy, seismic stratigraphy, chemostratigraphy,
Magnetostratigraphy
Sequence stratigraphy and their subdivisions with Indian examples.

Unit 3: Principles of stratigraphic analysis Facies concept in stratigraphy

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Walther’s Law of Facies.
Concept of paleogeographic reconstruction

Unit 4: Physiographic and tectonic subdivisions of India
Brief introduction to the physiographic and tectonic subdivisions of India.
Introduction to Indian Shield
Introduction to Proterozoic basins of India.
Geology of Vindhyan and Cudappah basins of India

Unit 5: Phanerozoic Stratigraphy of India
Paleozoic Succession of Kashmir and its correlatives from Spiti and Zanskar
Stratigraphy Structure and hydrocarbon potential of Gondwana basins.
Mesozoic stratigraphy of India:
   a. Triassic successions of Spiti,
   b. Jurassic of Kutch,
   c. Cretaceous, successions of Cauvery
basins Cenozoic stratigraphy of India:
   a. Kutch basin,
   b. Siwalik successions,
   c. Assam, Andaman and Arakan basins.
Stratigraphy and structure of Krishna-Godavari basin, Cauvery basin, Bombay offshore basin, Kutch and Saurashtra basins and their potential for hydrocarbon exploration

Unit 6: Volcanic provinces of India
   a. Deccan,
   b. Rajmahal,
   c. Sylhet Trap

Unit 7: Stratigraphic boundaries

Tutorial: -
1. Study of geological map of India and identification of major stratigraphic units.
2. Study of rocks in hand specimens from known Indian stratigraphic horizons
3. Drawing various paleogeographic maps of Precambrian time
4. Study of different Proterozoic supercontinent reconstructions.

SUGGESTED READINGS:
CORE COURSE: GEOLOGY

Paper -X

HYDROGEOLOGY

Unit 1: Introduction and basic concepts
Scope of hydrogeology and its societal relevance
Hydrologic cycle: precipitation, evapo-transpiration, run-off, infiltration and subsurface movement of water.
Rock properties affecting groundwater, Vertical distribution of subsurface water
Types of aquifer,

Unit 2: Groundwater flow
Darcy’s law and its validity
Intrinsic permeability and hydraulic conductivity
Groundwater flow rates and flow direction
Laminar and turbulent groundwater flow

Unit 3: Groundwater chemistry
Physical and chemical properties of water and water quality. BIS, WHO standard

Unit 4: Groundwater management,
groundwater level fluctuations
Basic concepts of water balance studies, issues related to groundwater resources development and management

Unit 5: Rainwater harvesting and artificial recharge of groundwater

PRACTICALS:
Preparation and interpretation of water level contour maps and depth to water level maps
Study, preparation and analysis of hydrographs, Water potential zones of India (map study). Simple numerical problems related to porosity and permeability. Groundwater flow, etc.

SUGGESTED READINGS:

CORE COURSE: GEOLOGY
Paper -XI
ECONOMIC GEOLOGY

Unit 1 Ores and gangues
Ores, gangue minerals, tenor, grade and lodes
Resources and reserves- Economic and Academic definitions

Unit 2: Mineral deposits and Classical concepts of Ore formation
Mineral occurrence, Mineral deposit and Ore deposit
Historical concepts of ore genesis: Man’s earliest vocation- Mining
Plutonist and Neptunist concepts of ore genesis

Unit 3: Mineral exploration
Exploration and exploitation techniques
Remote Sensing, Geophysical and Geochemical Explorations
Geological mapping at different scales, drilling, borehole logs and transverse sections

Unit 4: Structure and texture of ore deposits Concordant and discordant ore bodies
Endogenous processes: Magmatic concentration, skarns, greisens, and hydrothermal deposits Exogenous processes: weathering products and residual deposits, oxidation and supergene enrichment, placer deposits,

Unit 5: Ore grade and Reserve, assessment of grade, reserve estimation

Unit 6: Metallic and Nonmetallic ores
Metallogenic provinces and epochs
Important deposits of India including atomic minerals
Non-metallic and industrial rocks and minerals, in India.
Introduction to gemstones.

PRACTICALS:
Megascopic identification
Study of microscopic properties of ore forming minerals (Oxides and sulphides).

Preparation of maps: Distribution of important ores and other economic minerals in India.

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
SUGGESTED READINGS:

CORE COURSE: GEOLOGY

Paper -XII
GEOMORPHOLOGY

Unit 1: Introduction to Geomorphology, Endogenic and Exogenic processes

Unit 2: Geoid, Topography, Hypsometry, Global Hypsometry, Major Morphological features Large Scale Topography - Ocean basins, Plate tectonics overview, Large scale mountain ranges (with emphasis on Himalaya).

Unit 3: Surficial Processes and geomorphology, Weathering and associated landforms, Hill slopes Glacial, Periglacial processes and landforms, Fluvial processes and landforms, Aeolian Processes and landforms, Coastal Processes and landforms, Landforms associated with igneous activities

Unit 4: Endogenic- Exogenic interactions, Rates of uplift and denudation, Tectonics and drainage development, Sea-level change, Long-term landscape development

Unit 5: Overview of Indian Geomorphology, Extraterrestrial landforms

PRACTICALS:
Reading topographic maps ,Concept of scale Preparation of a topographic profile , Preparation of longitudinal profile of a river; Preparing Hack Profile; Calculating Stream length gradient index, Morphometry of a drainage basin,Calculating different morphometric parameters , Preparation of geomorphic map , Interpretation of geomorphic processes from the geomorphology of the area

SUGGESTED READINGS:

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
CORE COURSE: GEOLOGY

Paper -XIII

ENGINEERING GEOLOGY

Unit 1: Geology vs. Engineering, Role of Engineering geologists in planning, design and construction of major man-made structural features

Unit 2: Site investigation and characterization

Unit 3: Foundation treatment; Grouting, Rock Bolting and other support mechanisms

Unit 4: Intact Rock and Rock Mass properties
Rock aggregates; Significance as Construction Material

Unit 5: Concept, Mechanism and Significance of Rock Quality Designation (RQD)
Concept, Mechanism and Significance of:
  a. Rock Structure Rating (RSR)
  b. Rock Mass Rating (RMR)
  c. Tunneling Quality Index (Q)

Unit 6: Case histories related to Indian Civil Engineering Projects

PRACTICALS:
1. Computation of reservoir area, catchment area, reservoir capacity and reservoir life.
2. Merits, demerits & remedial measures based upon geological cross sections of project sites.
3. Computation of Index properties of rocks.
4. Computation of RQD, RSR, RMR and ‘Q’

SUGGESTED READINGS:
CORE COURSE: GEOLOGY

Paper -XIV
REMOTE SENSING AND GIS

Unit 1: Photogeology
Types and acquisition of aerial photographs; Scale and resolution; Principles of stereoscopy, relief
displacement, vertical exaggeration and distortion
Elements of air photo interpretation
Identification of sedimentary, igneous and metamorphic rocks and various aeolian, glacial, fluvial and
marine landforms

Unit 2: Remote Sensing, Concepts in Remote Sensing
Sensors and scanners
Satellites and their characteristics
Data formats- Raster and Vector

Unit 3: GIS, Datum, Coordinate systems and Projection systems
Spatial data models and data editing
Introduction to DEM analysis

Unit 4: GPS, Concepts of GPS
Integrating GPS data with GIS

Unit 5: Applications in earth system sciences

PRACTICALS:
Aerial Photo interpretation, identification of sedimentary, igneous and metamorphic rocks and various
aeolian, glacial, fluvial and marine landforms
Introduction to DIP and GIS softwares. Simple exercises which are introductory in nature

SUGGESTED READINGS:

   Springer- Verlag.
DISCIPLINE SPECIFIC ELECTIVE

Paper - I

EXPLORATION GEOLOGY

Unit 1: Mineral Resources

Unit 2: Prospecting and Exploration,
Principles of mineral exploration, Prospecting and exploration- conceptualization, methodology and stages, Sampling, subsurface sampling including pitting, trenching and drilling, Geochemical exploration.

Unit 3: Evaluation of data
Evaluation of sampling data
Mean, mode, median, standard deviation and variance

Unit 4: Drilling and Logging
Core and non-core drilling
Planning of bore holes and location of boreholes on ground
Core-logging

Unit 5: Reserve estimations and Errors
Principles of reserve estimation, density and bulk density
Factors affecting reliability of reserve estimation
Reserve estimation based on geometrical models (square, rectangular, triangular and polygon blocks) Regular and irregular grid patterns, statistics and error estimation

Tutorial:
1. Identification of anomaly
2. Concept of weighted average in anomaly detection
3. Geological cross-section
4. Models of reserve estimation

SUGGESTED READINGS:

Unit 1: Climate system: Forcing and Responses Components of the climate system Climate forcing, Climate controlling factors Climate system response, response rates and interactions within the climate system Feedbacks in climate system

Unit 2: Heat budget of Earth Incoming solar radiation, receipt and storage of heat Heat transformation Earth’s heat budget. Interactions amongst various sources of earth’s heat

Unit 3: Atmosphere - Hydrosphere Layering of atmosphere and atmospheric Circulation Atmosphere and ocean interaction and its effect on climate Heat transfer in ocean Global oceanic conveyor belt and its control on earth’s climate Surface and deep circulation Sea ice and glacial ice

Unit 4: Response of biosphere to Earth’s climate Climate Change: natural vs. anthropogenic effects Humans and climate change Future perspectives Brief introduction to archives of climate change Archive based climate change data from the Indian continent

Unit 5: Orbital cyclicity and climate Milankovitch cycles and variability in the climate Glacial-interglacial stages The Last Glacial maximum (LGM) Pleistocene Glacial-Interglacial cycles Younger Dryas Marine isotope stages

Unit 6: Monsoon Mechanism of monsoon
Monsoonal variation through time
Factors associated with monsoonal intensity
Effects of monsoon

Tutorial:
1. Study of distribution of major climatic regimes of India on map
2. Distribution of major wind patterns on World map
3. Preparation of paleogeographic maps (distribution of land and sea) of India during specific geological time intervals
4. Numerical exercises on interpretation of proxy records for paleoclimate

SUGGESTED READINGS:

DISCIPLINE SPECIFIC ELECTIVE
Paper -III
FUEL GEOLOGY

Unit 1: Coal
Definition and origin of
Coal Basic classification of coal
Fundamentals of Coal Petrology - Introduction to lithotypes, microlithotypes and macerals in coal
Proximate and Ultimate analysis

Unit 2: Coal as a fuel
Coal Bed Methane (CBM): global and Indian scenario
Underground coal gasification
Coal liquefaction

Unit 3: Petroleum
Chemical composition and physical properties of crudes in nature
Origin of petroleum
Maturation of kerogen; Biogenic and Thermal effect

Unit 4: Petroleum Reservoirs and Traps
IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Reservoir rocks: general attributes and petrophysical properties.
Classification of reservoir rocks - clastic and chemical.
Hydrocarbon traps: definition, anticlinal theory and trap theory
Classification of hydrocarbon traps - structural, stratigraphic and combination
Time of trap formation and time of hydrocarbon accumulation.
Cap rocks - definition and general properties.
Plate tectonics and global distribution of hydrocarbon reserves

Unit 5: Other fuels
Gas Hydrate
Nuclear Fuel

Tutorial:
1. Study of hand specimens of coal
2. Reserve estimation of coal
3. Section correlation and identification of hydrocarbon prospect
4. Panel and Fence diagrams

SUGGESTED READINGS:

DISCIPLINE SPECIFIC ELECTIVE
   Paper -IV
   RIVER SCIENCE

Unit 1: Stream hydrology
Basic stream hydrology
Physical properties of water, sediment and channel flow
River discharge, River hydrographs (UH, IUH, SUH, GIUH) and its application in hydrological analysis
Flood frequency analysis

Unit 2: River basin
Sediment source and catchment erosion processes
Sediment load and sediment yield
Sediment transport processes in rivers
Erosion and sedimentation processes in channel.
Unit 3: Drainage
Drainage network
Quantitative analysis of network organization - morphometry
Random Topology (RT) model and fractal analysis
Role of drainage network in flux transfer
Evolution of drainage network in geological time scale.

Unit 4: Rivers in time and space
River diversity in space, Patterns of alluvial rivers - braided, meandering and anabranching channels,
Dynamics of alluvial rivers
Channel patterns in stratigraphic sequences
Different classification approaches in fluvial geomorphology and its applications.

Unit 5: Channels and Landscapes
Bedrock channels, Bedrock incision process
River response to climate, tectonics and human disturbance
Bedrock channel processes and evolution of fluvial landscapes.

Unit 6: Fluvial hazards
Integrated approach to stream management
Introduction to river ecology.

**Tutorial:**

Stream power calculation
Longitudinal profile analysis
Hydrograph analysis and other related problems

**SUGGESTED READINGS:**
DISCIPLINE SPECIFIC ELECTIVE

Paper -V

EVOLUTION OF LIFE THROUGH TIME

Unit 1: Life through ages
Fossils and chemical remains of ancient life.
Geological Time Scale with emphasis on major bio-events.
Fossilization processes and modes of fossil preservation.
Exceptional preservation sites- age and fauna

Unit 2: Geobiology
Biosphere as a system, processes and products
Biogeochemical cycles
Abundance and diversity of microbes, extremophiles
Microbes-mineral interactions, microbial mats

Unit 3: Origin of life,
Possible life sustaining sites in the solar system, life sustaining elements and isotope records
Archean life: Earth’s oldest life, Transition from Archean to Proterozoic, the oxygen revolution and radiation of life
Precambrian macrofossils – The garden of Ediacara
The Snow Ball Earth Hypothesis

Unit 4: Paleozoic Life
The Cambrian Explosion.
Biomineralization and skeletalization
Origin of vertebrates and radiation of fishes
Origin of tetrapods - Life out of water
Early land plants and impact of land vegetation

Unit 5: Mesozoic Life
Life after the largest (P/T) mass extinction, life in the Jurassic seas
Origin of mammals
Rise and fall of dinosaurs
Origin of birds; and spread of flowering plants

Unit 6: Cenozoic Life
Aftermath of end Cretaceous mass extinction – radiation of placental mammals
Evolution of modern grasslands and co-evolution of hoofed grazers
Rise of modern plants and vegetation
Back to water – Evolution of Whales

Unit 7: The age of humans
Hominid dispersals and climate setting
Climate Change during the Phanerozoic - continental break-ups and collisions
Plate tectonics and its effects on climate and life

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Effects of life on climate and geology

**Tutorial:**
1. Study of modes of fossil preservation
2. Study of fossils from different stratigraphic levels
3. Exercises related to major evolutionary trends in important groups of animals and plants

**SUGGESTED READINGS:**
1. Stanley, S.M., 2008 Earth System History

**DISCIPLINE SPECIFIC ELECTIVE**

**Paper - VI**

**URBAN GEOLOGY**

Unit 1: Geology and Society
Necessity of Geology in Urban life. Geology in Urban Constructions
Geotechnical feature and mapping for subsurface in Metropolitan areas Building materials, Excavation and cutting in urban areas.

Unit 2: Geology and Urban Agriculture
Soil studies, Chemistry and geochemistry of soil in relation to ground water and fertilizer
Effect of pollutants on vegetable contamination

Unit 3: Urban Land use
Geotechnical site characterization, Geotechnical and land use mapping, Decision making in urban landuse, Geological problems in construction of underground structures in urban areas
Urban Tunneling: Tunneling for road and rail in urban areas, Method, Equipments, Importance of Geology

Unit 4: Urban water
Water lagging in built-up areas, Source of water, Standards for various uses of water Sources of contamination
Waste waters: Sources and its disinfection and treatment, Ground water surveys and resource development.

Unit 5: Urban wastes and Treatment, Geotechnical characterization for waste sites, Domestic waste, Industrial waste, Mine drainage, Power production waste, Radioactive waste, Need for special purpose mapping for selection of waste disposal sites.
Unit 6: GIS in Urban Geology

Unit 7: Precaution from seismic hazard in Urban planning
Seismic Hazards: Micro-zonations of hazard based on engineering geological features, Urban-subservice network.

Tutorial:
1. Map Reading
2. Ground water flow direction estimation
3. Case studies of Urban flood; Flood hydrographs
4. Case studies of urban planning

SUGGESTED READINGS:
2. Lollino, G. et al. (Ed.), Engineering Geology for Society and Territory. Springer

DISCIPLINE SPECIFIC ELECTIVE
Paper - VII
INTRODUCTION TO GEOPHYSICS

Unit 1: Geology and Geophysics
Interrelationship between geology and geophysics, Role of geological and geophysical data in explaining geodynamical features of the earth.

Unit 2: General and Exploration geophysics
Different types of geophysical methods - gravity, magnetic, electrical and seismic; their principles and applications
Concepts and Usage of corrections in geophysical data

Unit 3: Geophysical field operations
Different types of surveys, grid and route surveys, profiling and sounding techniques
Scales of survey, Presentation of geophysical data

Unit 4: Application of Geophysical methods
Regional geophysics, oil and gas geophysics, ore geophysics, groundwater geophysics, engineering geophysics

Unit 5: Geophysical anomalies
Correction to measured quantities, geophysical, anomaly, regional and residual (local) anomalies, factors controlling anomaly, and depth of exploration
Unit 6: Integrated geophysical methods
Ambiguities in geophysical interpretation, planning and execution of geophysical surveys

Tutorial:

Anomaly and background- Graphical method
Study and interpretation of seismic reflector geometry
Problems on gravity anomaly

SUGGESTED READINGS:

SKILL ENHANCEMENT COURSE
FIELD GEOLOGY -I
(Basic field training)
(CREDITS: 2)

Unit 1: Orientation of Topographic sheet in field, marking location in toposheet, Bearing (Front and back). Concepts of map reading, Distance, height and pace approximation
Unit 2: Identification of rock types in field; structures and texture of rocks, Use of hand lens Unit 3: Basic field measurement techniques: Bedding dip and strike, Litholog measurement Unit 4: Reading contours and topography

SKILL ENHANCEMENT COURSE
FIELD GEOLOGY -II
(Geological Mapping)
(CREDITS: 2)

Unit 1: Geological mapping, stratigraphic correlation
Unit 2: Primary (scalars and vectors) and secondary structures (linear and planar)
Unit 3: Trend, plunge, Rake/Pitch

Unit 4: Stereoplots of linear and planar structures, Orientation analyses

**SKILL ENHANCEMENT COURSE**

**FIELD GEOLOGY -III**
(Economic Geology field)

(CREDITS: 2)

**Module I**

Unit 1: Visit to any mineral deposit
Unit 2: Mode occurrence of ore, Ore mineralogy
Unit 3: Ore-Host rock interrelation
Unit 4: Ore formation process
Unit 5: Basic techniques of surveying, concept of outcrop mapping

**Module 2**

Unit 1: Visit to underground or open cast mine
Unit 2: Practical experience of mining methods
Unit 3: Underground mapping/ Bench mapping
Unit 4: Isopach and Isochore maps

**SKILL ENHANCEMENT COURSE**

**FIELD GEOLOGY -IV**
(Himalayan Geology field)

(CREDITS: 2)

Identification and characterization of major structural boundaries in Himalaya viz. MBT, MFT etc. or Field along any suitable transect of Himalayan foreland or Field transect in Siwalik or Identification of Himalayan and pre-Himalayan elements

**SKILL ENHANCEMENT COURSE**

**FIELD GEOLOGY -V**
(Precambrian Geology field) (CREDITS: 2)

Field transect in any Precambrian terrain

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
Study of craton ensemble including basic intrusive suites
Precambrian sedimentary basin
Basement-Cover relation in: a. fold belts, b. sedimentary successions

**SKILL ENHANCEMENT COURSE**  
**FIELD GEOLOGY - VI**  
(Visit to Engineering Project sites)  
(CREDITS: 2)

Unit 1: Geological mapping of a project site (Dam sites, Tunnel alignments etc)
Unit 2: On site visit & to study various geotechnical aspects related to the project site.
Unit 3: Identification of geotechnical problems of a project site and remedial measures to be taken.
Unit 4: Identification of environmental problems of a project site and remedial measures to be taken.
Unit 5: Computation of rock mass Properties (RQD, RSR, RMR & Q) in the field.
Unit 6: Identification of potential suspected/probable sites of Natural Disaster and suggestions about corrective/preventive measures.

**SKILL ENHANCEMENT COURSE**  
**FIELD GEOLOGY - VII**  
(Stratigraphy and paleontology-related field)  
(CREDITS: 2)

Field training along Phanerozoic basin of
India Documentation of stratigraphic details in
the field
Collection of sedimentological, stratigraphic and paleontological details and their representation
Facies concept and its spatio-temporal relation (Walther’s Law) and concept of facies distribution at basinal-scale
Fossils sampling techniques and their descriptions

**SKILL ENHANCEMENT COURSE**  
**PROJECT WORK - VIII**  
(CREDITS: 2)

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016

31
GENERIC ELECTIVE -I
ESSENTIALS OF GEOLOGY

Unit 1: Introduction to geology, scope, sub-disciplines and relationship with other branches of sciences

Unit 2: Earth in the solar system, origin
Earth’s size, shape, mass, density, rotational and evolutional parameters

Solar System- Introduction to Various planets - Terrestrial Planets
Solar System- Introduction to Various planets - Jovian Planets
Internal constitution of the earth - core, mantle and crust

Unit 3: Convections in the earth’s core and production of magnetic field
Composition of earth in comparison to other bodies in the solar system

Unit 4: Origin and composition of hydrosphere and atmosphere
Origin of biosphere
Origin of oceans, continents and mountains

Unit 5: Age of the earth; Radioactivity and its application in determining the age of the Earth, rocks, minerals and fossils

PRACTICALS:
1. Study of major geomorphic features and their relationships with outcrops through physiographic models.
2. Detailed study of topographic sheets and preparation of physiographic description of an area
3. Study of soil profile of any specific area
4. Study of distribution of major lithostratigraphic units on the map of India
5. Study of distribution of major dams on map of India and their impact on river systems
6. Study of major ocean currents of the World
7. Study of seismic profile of a specific area and its interpretation

SUGGESTED READINGS:
GENERIC ELECTIVE -II
ROCKS AND MINERALS

Unit 1: Minerals-Definitions, Physical properties of minerals
Mineralogical structure of earth, planetary minerals and native elements

Unit 2: Mineral structures
Mineralogy of the Earth's crust, mantle and core

Unit 3: Nature of light and principles of optical mineralogy
Optical classification of minerals.
An overview of environmental and radiation mineralogy, biomineralisation and gemology.

Unit 4: Rocks-Definitions and types, Basics of rock formation.
Igneous rock- magma generation and differentiation
Sedimentary rocks- surface processes and sedimentary environments
Metamorphic rocks- chemical system and types of metamorphism
Rock cycle-interactions between plate tectonics and climate systems

Tutorial:
1. Study of physical properties of minerals
2. Introduction to optical microscopy
3. Study of optical properties of minerals
4. Study of physical properties of rocks
5. Study of optical properties of rock under thin sections
6. Understanding crystal symmetry via wooden models
7. Stereographic projection of mineral faces
8. Mineral formula calculation
9. Crystal chemical calculation
10. Introduction to analytical techniques for rock and mineral study.

SUGGESTED READINGS:
GENERIC ELECTIVE - III
PHYSICS AND CHEMISTRY OF EARTH

Unit 1: Earth: surface features
Continents, continental margins, oceans

Unit 2: Earth’s interior - variation of physical quantities and seismic wave velocity inside the earth, major sub divisions and discontinuities.
Concepts of Isostasy; Airy and Pratt Model
Core: Seismological and other geophysical constraints
The geodynamo - Convection in the mantle

Unit 3: Elements of earth’s magnetism.
Secular variation and westward drift
Solar activity and magnetic disturbance

Unit 4: Elements: Origin of elements/nucleosynthesis.
Abundance of the elements in the solar system / planet earth
Geochemical classification of elements.
Earth accretion and early differentiation
Isotopes and their applications in understanding Earth processes.
Stable isotopes: Stable isotope fractionation. Oxygen isotopes
Sublithospheric Mantle (Mineralogy/phase transitions)

Unit 5: Environmental geochemistry
Geological disposal of nuclear waste
Lead in environment and effect of lead on human health

Tutorial:
1. Projection of major elements on binary and triangular diagrams for rock classification
2. Projection of major element data on Harker’s diagram to characterize magmatic differentiation
3. Study of trace elements through a) Projection of chondrite/primitive normalized trace elements to characterize sources b) Projection of trace elements on tectonic discrimination diagrams
4. Understanding Earth structure through behavior of seismic wave propagation
5. Problems on isostasy

SUGGESTED READINGS:
GENERIC ELECTIVE -IV
EARTH RESOURCES

Unit 1: Earth Resources
Resource reserve definitions; mineral, energy and water resources in industries
Historical perspective and present
A brief overview of classification of mineral deposits with respect to processes of formation in relation to exploration strategies

Unit 2: Definition of Energy: Primary and Secondary Energy
Difference between Energy, Power and Electricity
Renewable and Non-Renewable Sources of Energy
The concept and significance of Renewability: Social, Economic, Political and Environmental Dimension of Energy

Unit 3: Major Types and Sources of Energy
Resources of Natural Oil and Gas
Coal and Nuclear Minerals
Potential of Hydroelectric Power, Solar Energy, Wind, Wave and Biomass Based power and Energy

Unit 4: Energy Sources and Power Generation: Nuclear, Hydroelectric, Solar, Wind and Wave- General Principles.
Ground water resources and its role in economic development of a country

Tutorial:
1. Plotting of major Indian oil fields on map of India
2. Problems related to hydroelectric power generation
3. Problems related to assessment of possible oil exploration site from geological maps
4. Problems related to energy demand projection of India and possible mitigation pathways
5. Problems related to biofuel

SUGGESTED READINGS:
GENERIC ELECTIVE - V
NATURAL HAZARDS AND DISASTER MANAGEMENT

Unit 1: The Lithosphere and Related Hazards
Atmospheric Hazards, Hydrosphere and Related Hazards

Unit 2: Concepts of disaster
Types of disaster: natural and manmade - cyclone, flood, landslide, land subsidence, fire and earthquake, tsunami and volcanic eruption

Unit 3: Tectonics and Climate, Meteorite Impacts
Issues and concern for various causes of disasters
Disaster management, mitigation, and preparedness
Techniques of monitoring and design against the disasters
Management issues related to disaster

Unit 4: Disaster Management in India
Risk, Vulnerability and Hazard
Mitigation through capacity building
Legislative responsibilities of disaster management; disaster mapping, assessment
Pre-disaster risk & vulnerability reduction
Post disaster recovery & rehabilitation
Disaster related infrastructure development

Unit 4: Hazard Zonation Mapping
Remote-sensing and GIS applications in real time disaster monitoring
Prevention and rehabilitation

*The course will also include discussions on topics determined by students in Tutorial. There would be 12 student presentations apart from the lectures. The topics would be assigned to students based on their interest.*

SUGGESTED READINGS:
GENERIC ELECTIVE -VI
EARTH SURFACE PROCESSES

Unit 1: Introduction to earth surface processes
Historical development in concepts, terrestrial relief, scales in geomorphology,

Unit 2: Energy flow and relative energy of surface processes.
Weathering and formation of soils, karst and speleology, slope and catchment erosion processes, fluvial, aeolian, glacial, peri-glacial and coastal processes and resultant landforms, Water and sediment flux in river systems, Morphometric analysis of drainage basin and geomorphology-hydrology relationship.

Unit 3: Rates and changes in surface processes
Techniques for measuring rates of processes: sediment budgeting, rock magnetism, isotope geochemical tracers, cosmogenic nuclides, OSL & C-14 dating

Unit 4: Controlling factors (tectonics, climate, sea level changes and anthropogenic) and surface processes
Climate change and geomorphic response of fluvial systems of arid and humid regions Geomorphic response to tectonics, sea level/base level change, anthropogenic affects Introduction to Anthropocene

Unit 5: Geomorphic concepts in cause-effect relationship
Spatial & temporal scales, geomorphic system, connectivity, buffering, magnitude-frequency concept, time lag, sensitivity, equilibrium, threshold, non-linearity & complexities
Mega geomorphology and process interrelationship

Surface processes and natural hazards; Applied aspects of geomorphology; Introduction to planetary geomorphology.

Tutorial:
Mapping of different landforms and interpretation of surface processes
Exercises on hill slope development, fluvial channel, sediment erosion and transport, sediment budgeting, aggradation and degradation events, drainage basin, drainage morphometry
Basic exercises on computation of rate for different surface processes

SUGGESTED READINGS:

IMSc (Geology: BSc Hons. Component) Syllabus, Department of Geology, School of Earth Sciences, June, 2016
GENERIC ELECTIVE - VII
INTRODUCTION TO SUSTAINABILITY

Unit 1: Introduction to Sustainability; basic concepts Human Population – Past and Future trends

Unit 2: Ecosystems
Extinctions and Tragedy of Commons
Climate and Energy
Water Resources and Agriculture

Unit 3: National Resources Accounting
Environmental Economics and Policy
Measuring Sustainability
Systems interconnectivity among Primary Sustainability challenges
Sustainability Solutions: Some examples

*The course will also include discussions on topics determined by students in Tutorial. There would be 12 student presentations apart from the lectures. The topics would be assigned to students based on their interest.*

SUGGESTED READINGS:

**GENERIC ELECTIVE- VIII**  
FOSSILS AND THEIR APPLICATIONS

Unit 1: Introduction to fossils  
Definition of fossil, fossilization processes (taphonomy), taphonomic attributes and its implications, modes of fossil preservation, role of fossils in development of geological time scale and fossils sampling techniques.

Unit 2: Species concept  
Definition of species, species problem in paleontology, speciation, methods of description and naming of fossils, code of systematic nomenclature

Unit 3: Introduction to various fossils groups  
Brief introduction of important fossils groups: invertebrate, vertebrate, microfossils, spore, pollens and plant fossils. Important age-diagnostic fossiliferous horizons of India

Unit 4: Application of fossils  
Principles and methods of paleoecology, application of fossils in the study of paleoecology, paleobiogeography and paleoclimate

Unit 5: Societal importance of fossils  
Implication of larger benthic and micropaleontology in hydrocarbon exploration: identification of reservoirs and their correlation. Application of spore and pollens in correlation of coal seams, spore and pollens as indicator of thermal maturity of hydrocarbons reservoirs, fossils associated with mineral deposits, fossils as an indicator of pollution.

**Tutorial:**  
1. Study of fossils showing various modes of fossilization  
2. Distribution of age diagnostic fossils in India  
3. Biostratigraphic correlation

**SUGGESTED READINGS:**

2. Clarkson, E.N.K. 1998. Invertebrate Paleontology and Evolution George Allen & Unwin  
GENERIC ELECTIVE- IX
MARTIAN GEOLOGY

Unit 1: MARS – OUR POTENTIAL HOME?

History of the exploration of Mars; The Journey of Mangalyaan

Evolution of Mars

Unit 2: The characteristics of Mars and its interior

The Martian atmosphere and hydrosphere.

Unit 3: Surface provinces of Mars

Unit 4: Geochemical analogs and Martian meteorites

Martian History Epochs of change: what went "wrong" and why?

Unit 5: Life in Mars

Is there evidence for life on Mars?

Physical and chemical conditions supportive of permanent Mars occupation; Terraforming of Mars and its challenges

New Trends for Human Missions to Mars and Human colonization of Mars

*The course will also include discussions on topics determined by students in Tutorial. There would be 12 student presentations apart from the lectures. The topics would be assigned to students based on their interest.*

SUGGESTED READINGS:

GENERIC ELECTIVE- X
SOILS: PRESENT AND PAST

Unit 1: Soil forming processes: Chemical weathering, major buffer maintaining ocean/atm/biosphere O₂ and CO₂, new compounds/minerals of greater volume and lower density; Oxidation; Carbonation; Hydrolysis; Hydration; Base Exchange; Chelation; Microbial weathering

Unit 2: General soil forming regimes: Gleization; podzolization; lessivage; ferralitization; calcification; salinization

Unit 3: Soil forming processes: Physical weathering, loosening and particle size reduction; pressure release; thermal expansion; growth of foreign crystal.

Unit 4: Modern soils and key pedofeatures: Soil structures; horizons; roots; Fe-Mn mottles and concretions; pedogenic carbonate

Unit 5: Introduction to paleopedology and paleosols; role of factors controlling paleosol formation- parent material, climate, vegetation, topography, time.

Units 6: Introduction to soil taxonomy and paleosol taxonomy

Unit 7: Micromorphology: Thin section analysis of paleosols

Unit 8: Geochemistry: molecular rations; chemical weathering indices

Units 9: Stable isotope geochemistry: carbon¹³ and oxygen¹⁸ system for vegetation, temperature, pCO₂

Unit 10: Diagenetic overprinting in fossil soils: compaction; oxidation of organic matter; cementation; illitization

Unit 11: Geological record of fossil soils- Precambrian paleosols- evolution of paleoatmospheric conditions

Unit 12: Geological record of fossil soils- Paleozoic paleosols- evolution of land animals and plants, coal, Permian-Triassic transition paleosols and extinction events

Unit 13: Geological record of fossil soils- Mesozoic-Cenozoic paleosols- fossil soils at K-T extinction event, Paleogene fossil soils at green house to ice house transition, evolution of Asian monsoon system.

Unit 14: Pleistocene-Holocene paleosols- human impact on landscape and soils, climate change, neotectonics.

Unit 15: paleosols and non-marine sequence stratigraphy based on paleopedology and sedimentology of fluvial successions.
Tutorial:

1- Micromorphic detailing of the paleosols- structure, horzonation, color, rhizocretions, pedogenic carbonate etc.
2- Particle size analysis and clay mineral analysis of the paleosols
3- Micromorphological analysis- thin section preparation, description, and interpretation
4- Geochemical analysis- bulk geochemistry, molecular ratios and weathering indices
5- Field trip to examine modern and fossil soils- field characterization and sampling procedures

SUGGESTED READINGS:

GENERIC ELECTIVE- XI
STUDIES ON CRYOSPHERE

Unit 1: Introduction to Cryosphere
Cryosphere, Distribution and its components, Terrestrial and Marine cryosphere, Role of cryosphere in the climate system, Remote sensing of cryosphere and its applications.

Unit 2: Terrestrial Cryosphere
Snow formation, Snowfall and Snow cover, Metamorphism of snow, Snow and Remote sensing, Snowmelt modeling, Glacier Characteristics, Types of Glaciers, Erosional and Depositional features of Glaciers, Glacier mass balance, Surging Glaciers, Glacier hydrology, Glacier and remote sensing, Avalanches and its Characteristics, Ice caps and Ice sheets, Greenland or Antarctic Ice sheets, Sea level changes and Ice sheet, Permafrost and its features, Lake and River ice. Terrestrial Cryosphere in the present, past and future.

Unit 3: Marine Cryosphere
Ice shelves, Ice bergs, Sea ice characteristics, Ice islands, Ice streams, Mass balance of Sea ice, Ice drift and ocean circulation. Marine Cryosphere in the present, past and future.
Tutorial:

Remote sensing

1. Linear and non-linear regression algorithms to estimate SWE (snow water equivalent) from remote sensed data (mainly microwave data)
2. Estimation of precipitation from remote sensed data

Snowmelt run-off modeling

1. Empirical (Snow cover to spring snowmelt relation)
2. One of the non-empirical model (Degree-day, modified degree-day or energy balance methods)

SUGGESTED READINGS:

1. The Global Cryosphere by Roger Berry and Thian Yew Gan Cambridge University Press
2. Web inputs from sites sources such as TRMM and SMMR (Scanning Multichannel Microwave Radiometer) sites

GENERIC ELECTIVE- XII
NUCLEAR WASTE MANAGEMENT

Nuclear Waste Management

Glass/rock alteration studies by mathematical modeling using EQ3/6 and GWB. Nuclear waste confinement and safe disposal in deep geological repository. Application of clays as natural barrier.

Tutorial:

1. Determination of physical properties such as hardness, durability, melting and pouring temperatures.
2. Chemical characterization of synthetic and natural glass.

4. Mathematical modelling and extrapolation of natural acidic (obsidian, rhyolite) and basic
(nephелиnite and basaltic) glasses.
5. Determination of rate of alteration and recognition of neo-formed minerals.
6. Calculation of retention coefficient for glass residue.

SUGGESTED READINGS:

3. T.G. Wolery: reaction path modeling of aqueous geochemical systems.
